Professional Summary

Full-stack engineer with experience building **production-ready, AI-powered systems** across frontend, backend, and browser extensions. Strong in Python, TypeScript, and React, with hands-on work in security-focused architectures, real-time pipelines, and cloud deployments. Focused on scalable, explainable solutions with high reliability and performance.

Technical Skills

Languages: Python, JavaScript, TypeScript, Go, C++, SQL

Frontend: React.js, Next.js, HTML, CSS

Backend: Node.js, Express.js, Django, Flask, REST APIs

Databases: PostgreSQL, MongoDB, Prisma

Cloud & DevOps: AWS (EC2, S3), Google Cloud Platform, Docker

Tools: Git, VS Code, Jira, Figma, Socket.io, Cloudinary, Clerk

Education

IIITDM Jabalpur — B.Tech. in Computer Science and Engineering Nov 2022 – May 2026

Experience

Backend Developer Intern — BlueStack May 2025 – Jul 2025

- Developed REST and GraphQL APIs, improving geospatial query response times by 45%.
- Built modular micro-SaaS services using Node.js and PostgreSQL with fault-tolerant design.
- Collaborated with frontend and DevOps teams to optimize performance and deployment workflows.

Software Engineering Intern — Ai Talent Force, Japan (Remote) Oct 2025 – Dec 2025

- Designed and implemented a **hybrid email phishing detection pipeline** (heuristics + embeddings + LLM), achieving **89% F1 score** with high recall.
- Independently built a **Chrome Extension (Manifest V3)** for Gmail with real-time scanning, inline security badges, and AI-generated explanations.
- Implemented **cost-aware LLM routing** based on email complexity, reducing inference usage by **60%** without accuracy loss.

Projects

ATF CyberX — AI-Powered Phishing Detection Platform — github.com/AkprasadoP/ATF-CyberX

- Built a **production-grade email phishing detection system** using a hybrid pipeline (heuristics + embeddings + LLM) with **89% F1 score**.
- Developed a **Chrome Extension (Manifest V3)** for Gmail with real-time scanning, inline security badges, and AI-generated explanations.
- Implemented cost-aware LLM routing based on email complexity, reducing inference usage by **60%**.

GenRAG — Retrieval-Augmented Generation System — github.com/AkprasadoP/GenRAG

- Built a local RAG pipeline from scratch without vector databases or high-level frameworks.
- Processed large documents (10,000+ pages) with **90% retrieval accuracy**.
- Integrated Google Gemini API with fallback logic for reliable document Q&A.

University Website (IIITDM Jabalpur) — github.com/AkprasadoP/IIITDMJ-Website-V2.1

- Developed a university portal for 3,000+ users using Node.js, PostgreSQL, and React.js.
- Improved First Contentful Paint by 65% using server-side rendering and performance tuning.
- Built JWT-secured admin dashboard, reducing content management effort by 40%.

Achievements / Awards

Deco.Cx Global Hackathon (6th Place, 2023) — Organized by Deco.cx. Built ultra-fast HTMX templates among 1,800+ teams.

CodeTally Hackathon (Runner-Up, 2024) — Organized by CodeTally. Built scalable collaborative coding platform.
